What files will be used by AutoCAD as the temporary.dwg files for this procedure? Only.dwg and.dxf files are used, depending on the procedure. If you don't have the.dwg file, you can import an.dxf file. The.dwg file is the one AutoCAD saves as it goes through each of the procedures you perform. The.dwg file is the original file that will be displayed in Autocad. The.dxf file is the file that AutoCAD imports to do the procedures. What AutoCAD product is used in this procedure? When you have the.dwg and.dxf files, you can use Autocad to do any of the procedures. If you don't have the.dwg and.dxf files, or if you want to use this procedure on a different AutoCAD software, see Chapter 4 for instructions on importing a.dwg and.dxf file into your own AutoCAD. What's different about this procedure? This procedure is for inserting DWG and DXF files into an existing drawing. The files must be saved as.dwg or.dxf and are smaller in size than a typical drawing. You need to know the file's size, so you can include the appropriate amount of space in your drawing.
