AutoCAD is the flagship product of Autodesk. It is used by architects, engineers, designers, and drafters to create computer-based graphics of architectural and engineering designs. AutoCAD is used by engineers to create detailed plans and drawings of mechanical and electrical systems, such as bridges, aircraft, trains, etc. It is used by architects to create detailed plans and drawings of buildings. It is used by designers to create detailed technical drawings of computer hardware, software, and networking, as well as mechanical and electrical systems, such as aircraft. It is used by educators to create detailed drawings of learning aids. AutoCAD was initially created by Gary Kildall and a group of engineers and artists at Digital Research. It was developed by the two companies as a direct competitor to competing systems such as Vectorworks (then known as "Computer Associates Vectorworks"). After a series of disagreements, Digital Research formed the Autodesk company in 1983. Autodesk then acquired Digital Research in 1993. Autodesk replaced Digital Research's CAD software with the version of AutoCAD that was then in production. Version History 1982–1991 Version 1.0 Released as MicroCAD-DW/PA 1.0, a desktop DOS graphics application. I'm trying to build a.NET Core 2.0 console app using Visual Studio 2017. When I try to build the console app, I get a ton of errors like this one: /Library/Frameworks/Mono.framework/External/xbuild/Xamarin/iOS/Xamarin.iOS.Common.targets: error MSB4036: The command ""/usr/bin/make" all-am" exited with code 1. [/Users/myusername/MyApp/src/myapp.Core/myapp.Core.csproj] I'm doing this because I'm trying to get a.net core 2.0 app running in iOS. The Xamarin.iOS NuGet package will build the app fine in Xcode, but I need to run it in a debug mode in iOS, so I need to build it using Visual Studio. I can't find any references on the internet about doing that. I think I can build a Windows Console app using Visual Studio 2017, but I can't see how to do it with.NET Core 2.0 Can someone please point me in the right direction? A: I don't think it is possible to debug a.net core application in visual studio, and I agree with @IvanTJ, if you are using Mono you can use Xamarin Studio.
