KeyMacro lets you create macros for commonly used keyboard shortcuts. KeyMacro's main interface displays a list of macros that you have configured with descriptive text for each one. You can add, edit and delete them as needed, then apply all the changes with one click. Improved user experience The new layout of KeyMacro's main interface and the addition of tabs on each window are designed to allow a better browsing experience. In fact, you can now navigate the window by means of tabs that are labeled with descriptive text. KeyMacro can be set to automatically run a macro every time you press a certain key combination, or it can be paused for an instant to adjust the parameters. This lets you configure macros in the same way as in Windows-based applications. Personalize your keyboard You can map individual keys to macros by simply configuring KeyMacro and assigning a new shortcut key. Alternatively, you can use one of the many pre-configured shortcut keys and assign a function to it. For example, you can assign the F4 key to open the task manager and create a new shortcut for it. The program can be used in any way that a keyboard shortcut can be used, including creating new macros, starting programs and changing the system date and time. Free and universal app KeyMacro is compatible with Windows and Mac OS. It doesn't require.NET framework. The size of the downloaded file is only 21 MB. Evaluation and conclusion KeyMacro is a useful tool for quickly creating macros that can be easily recalled when needed. It gives you the ability to change the keyboard shortcuts for built-in Windows or Mac OS utilities. KEYMAP Advanced Description: KEYMAP Advanced is a utility that helps you create shortcuts for your Windows 10 or 8.1.
