Installed Programs Finder Cracked 2022 Latest Version is a simplistic piece of software designed to list all installed applications on your computer. It has a few filters and lets you save the list to file. Simple setup and interface Setting it up takes little time and effort, as there aren't any special options, prerequisite software products, or third-party offers involved. It's wrapped in a simple interface made from a standard window that doesn't put any emphasis on graphical elements, yet it's quite easy to navigate. View, save and print the list A list with all installed programs can be obtained with the click of a button. Before doing so, you can instruct the tool to include or exclude Windows hotfixes, updates and security updates. In the task list you can check out the name, version, full path and install date of each product, save the list to file by specifying the output directory, filename and format, as well as print all information. There are no other notable options available. Evaluation and observations It didn't put a strain on the computer's performance in our tests, thanks to the fact that it needed a low amount of CPU and RAM to work properly. No error dialogs were displayed and it didn't freeze or crash. On the other hand, Installed Programs Finder comes packed with a weak set of features, especially when taking into account that it isn't freeware, and there are plenty of free products out there offering additional options for free. For example, it doesn't have a search function. Conclusion Although it hasn't received updates for a very long time, Installed Programs Finder still works on newer Windows editions. It offers a simple and straightforward solution for obtaining, saving and printing a list with all of your installed software. Most Popular Download Brahmapura When the internet was still just a thing in the 1990s, Point Richmond resident Leo Ieiri had a simple goal in mind: create a website that would act as an archival home for Richmond's world-class jazz scene. Ten years later, that goal has become a full-fledged non-profit, the mission of which is to preserve and make... Simple Setup and Interface View, save and print the list Evaluation and Observations Installed Programs Finder isn't the most powerful program around, but it does have some practical uses, and it doesn't come with any unnecessary features. If you don't need a few extra features, it might suffice as a free solution. Peachtree Find is a simple and powerful directory search tool. Not only can you search on file attributes, file name, and file location, but you also can do advanced file searches, such as file creation and modification dates, file size, file content, and so on. When there is a match, Find will show details like the file name, location and size, creation date and time, file attributes, permissions and more. You can also save results to CSV and PDF, and you can also bookmark the search results page so you won't have to search again when you want to access the same file. Why you need it: Peachtree Find is designed for power users who need to search large directories (such as your whole hard drive) for specific files or want to search different files/directories in different ways. It's free, so you don't need to worry about paying to use this software. Peachtree Find has been designed with power users in mind and it includes tons of functionalities. For example, you can search: * On file attributes: size, owner, group, date created and last modified, extension, creation and last modification time, file type, archive, comment, file location, by using a hyperlink and text criteria. You can also specify that you want to search for all but hidden files, read-only files and system files. * On file name: be it a full or partial text string match. In addition to specifying whether you want to match upper or lower case, you can also specify that you want to search for terms in names such as extensions (only lower case), file names and full paths. * On file location: on local or network hard drives, removable drives, USB drives, and the internet. You can also specify that you want to search for only local files or only files on the internet. * By file content: for instance, you can do a file search with many types of programs installed on your computer, or with Windows installed on your computer. You can also save the results to file so you can open them offline. * By file creation or modification date. You can
