Advertisements After years of asking, I finally got to see the new show by artist Julian Schnabel, *The Dancer and the Dance* at the Walker Art Center. The show included a mix of paintings and sculptures, and was the first time I saw some of Schnabel's work that wasn't related to Bob Dylan. I wasn't sure what to expect from the show, and it definitely didn't disappoint. What I found was a vast array of color, shapes, and movement that kept me entranced for the entire night. Schnabel uses multiple canvases for his work that make it very intimate, like when the viewer is practically on top of the dancers. In those situations, the show is even more engrossing. *The Dancer and the Dance* felt like a kind of playful performance art, while also being a meditation on painting, sculpture, dance, and the relationship between the three. Schnabel said in an interview with Artnet that the form of dance he uses comes from Appalachian folk dances and Chinese wushu, which was a breath of fresh air. I've never been one to spend much time with painting and sculpture, but *The Dancer and the Dance* put a face to the work, and made it seem less boring and more like work of great importance. My favorite part of the show was when the person in the audience had the ability to physically interact with the dancers, and had a little freedom to move around. The audience was actually a part of the dance, it felt like we were a part of the art.

Description: 27.59 MB Windows 10 User Account Control Settings Manager

Windows 10 has tweaked the UAC (User Account Control) settings to ensure that you can easily view your custom settings and control them from a separate window. The Settings page now comes with a default view that is divided into four categories. Under the General tab, you can now choose a new default setting for the Skip button when prompted for UAC. The default setting is to continue. You can also configure the UAC by setting the new Require administrative rights option, which is useful for those who are against granting admin rights to every application. Another useful feature that you get to see under the User Account Control Settings is the Automatic elevation request feature. It allows you to pick when you would like to get prompted for UAC. The app can also display a custom message to the user in cases where he/she picks to continue running a program. This app also enables you to view your own custom UAC settings and control them. You can further fine-tune the settings and prompt the user for admin rights. Customize the UAC Settings Windows 10 has also introduced a new UAC setting that enables you to have a quick look at your settings. The window has been created to act as an alternative to the System Settings, which is a bit too extensive for the purpose. You can configure this window to work with various settings like Choose which programs can make changes to your Start menu, Change the way your browser handles phishing sites, Set what to do when Windows asks for admin rights, and Choose when to notify you that a program wants admin rights. The UAC Settings can also be accessed from the Power Options by going to the Advanced tab. You can view the different options that have been configured and choose which one you want to use. 89.44 MB Windows 10 Microsoft Edge Settings Microsoft Edge is Microsoft's latest browser, and it comes with some interesting features. One of the most useful ones is the new One Tab View option that

allows you to view all tabs in a single window. Here, you can get an overview of all your tabs, and you can easily open a particular tab. You can even pin your favorite sites and access them at any time. The new Edge can also display notifications and other status items on the browser's tab bar. If you have multiple programs open, you can even enable a new One Window View to display the content of all tabs in a single window. Edge also allows you to sync your browsing history to the cloud. In the Settings, you can access the preferences and enable or disable this feature. You can also use a pop-up menu to display the toggle button at the top right corner. You
