This is a high-performance version of the free MakePassD Lite app that you can find on our website ([www.makepassd.com](http://www.makepassd.com)). In addition to supporting the free version, this new version includes the following improvements:• Support of high-quality MD5 hash generation• More options to customize the generated passwords (e.g. "yyyyyyyy" instead of "00000")• Option to generate different sets of passwords that you can store in your password manager (such as KeePassX)In the free version you can generate as many passwords as you want and store them anywhere. But as the passwords are not encrypted, a hacker could discover your passwords by simply searching your PC.To do this, all you have to do is install the MakePassD Pro app, right-click on the "Generate" button, select "Open password manager" and select the folder where you want to store the passwords. This way, the passwords are encrypted and no hacker can find them. And if you are in a hurry, you can generate an unlimited number of password from the "MakeNow" button that is displayed when you right-click on the "Generate" button. This way, you can have a list of passwords in your PC that you can easily copy to any text editor or spreadsheet. This is, however, not possible with the free version.
