System requirements: Windows 2000, Windows XP, Windows Vista, Windows 7, Windows 8/8.1 Image, Screen and Fax can be accessed via the Recycle Bin, and you can send files to it with drag-and-drop to maintain the paper trail. But the most impressive feature of Image, Screen and Fax for Windows XP is its ability to find lost pictures and restore them to any folder. Applications should quit gracefully. A program should close the application window, suspend any running programs, and not leave other programs running. If a crash occurs, a program should not leave other programs running. If a program does crash, it should be documented and the cause tracked to prevent other users from experiencing the same problem. In addition to this, applications should not be advertised on the desktop, pinned to the taskbar, or made an icon on the Start menu unless they are absolutely necessary for the operation of the operating system. An application that was once part of the system but is now discontinued should be removed from the list. You should also consider

removing third-party applications that are no longer recommended for use by the operating system or have been obsoleted by newer third-party applications. In addition, you should remove any third-party applications that were not tested by the OS development team. Applications should use a specific interface language, also known as a programming interface. This interface should provide the user with a standard set of commands, should be consistent across all supported languages, and should be easy for application developers to use. The application should be listed in the help system. This can be done in a number of ways. The documentation provided by the application should be helpful. Information provided by the operating system about the application, such as launch information, should be listed as well. Applications should not use third-party functions, such as a third-party font manager
