- Version: 3.6.4.4 - Size: 4.77 MB - Toolsverse.com Product Page: No tool I've ever seen can replace the feeling I get while fiddling around with SQL queries. But as I've been working with SQL Server for almost two decades, I don't really know how to explain it. Or do you? "I don't know if I should take my coffee or leave it." "Take it out and return it" "Return it? Never do that." I hope that you didn't interpret the previous sentence in a cynical way. I'm not a mean person, I swear. I just love making SQL statements. So I'd like to share my favorite SQL Query String Generator with you. (not really a generat'r) You probably won't use it, but it might be useful to someone else. A database is a special type of structure that allows you to store and share data. What is a database? A database can store any type of data, from a list of your contacts to your favorite recipes. However, databases are usually used for large amounts of data, such as a personal photo album. How to start using databases? The most common way to start using a database is to create a new database that stores the information that you need. There are two ways to create a new database: "Menu > Data > Create New Database" Or "Add Database > New Database" Once you created the database, you should see the created database under "Data" or "Databases". How to access the databases? You can access your databases via "Databases". But when you have too many databases, you might want to sort your databases by "Added" or "Name". A database is the main structure of your SQL Server that contains different types of information. What is a database? A database is a special type of structure that allows you to store and share data. What is a table? A table is the basic data structure that contains
