Ultra Audio Recorder Free [Mac/Win]

Ultra Audio Recorder is a Windows software product developed to record audio files from various sources. The GUI may look a bit unprofessional at the first glance, but it was designed to serve two different goals at the same time. First of all, it tries to provide one-click access to the main settings, while at the same time it lets you start a new recording with just one click. As always, you are allowed to choose the sound card and the recording device, with two different sliders implemented to adjust gain and balance. More settings are however available in a dedicated screen where you can choose the output file format and configure automatic gain control or the voice active system. Ultra Audio Recorder works with three different formats, namely MP3, WAV and WMA, each with a different set of options. Audio quality is good and the application works very smooth on all Windows versions, but it still lacks some important features. For example, Ultra Audio Recorder doesn't comprise hotkey support, which is quite a major setback given the fact that you can't start a new recording using keyboard shortcuts. A help manual is also available for anyone who needs more information on a specific feature. As a conclusion, Ultra Audio Recorder is nothing different from the other similar apps on the market. What's more, it even lacks features that could disappoint many users, while the interface needs to be revised too for a modern and more appealing appearance. The latest version of Ultra Audio Recorder for Windows was released in October 2010 and comes with a lot of new features, as well as major changes. As usual, new version of Ultra Audio Recorder includes also the upgrade license for a valid version of Winamp 3.x or later, so you may want to check if your current version of Winamp is compatible with Ultra Audio Recorder. As of the latest version, Ultra Audio Recorder is officially licensed with ID4 and Tagged Audible Standard Support. One of the most important new features of the latest version of Ultra Audio Recorder for Windows is the version control. Users have the possibility to merge the files recorded with different versions of the program, which also means that they can choose to keep a backup of a specific recording on a separate file. The app also supports hotkeys, so users may now use keyboard shortcuts to record, play, pause and stop their files. Ultra Audio Recorder also allows the user to set some options using a graphical interface or directly from the command line
