syncplify.me FTP! Features: - easy to use - easy to use for beginners - transfers FTP & SFTP - upload & download support - upload/download to/from multiple hosts - password protection - transfer to SFTP servers - transfer to FTP servers - can be used with SMB or FTP protocol - transfers FTP & SFTP - supports drag & drop - supports your FTP & SFTP protocol - shows preview of the files you transfer - intuitive interface - list of some common file types - has a built-in FTP cache - schedule multiple transfers - no time limit when waiting for download - no time limit when waiting for upload - transfer to SFTP servers - transfer to FTP servers - allows you to create directories - can transfer files with 'Quick Connect' Highly efficient FTP client which transfers files fast, securely, and easily. It transfers files from a FTP server and/or other FTP servers (multiple hosts). The program handles FTP servers in secure mode, and you can specify passwords to transfer files. You can make sure that files will not be modified during transfer by selecting the 'Ask for confirmation' option. You can also save the directory names and file names of the transferred files in the 'My files' directory of the current user. You can easily connect to FTP servers by choosing from the pre-configured servers. The program is free and easy to use. You can specify paths or filenames of files to be transferred. You can transfer files with 'Quick Connect' and with 'Files will be transferred automatically on completion of transfer'. You can transfer files from multiple FTP servers at the same time. You can connect to multiple FTP servers simultaneously. You can transfer

What's New in the?

syncplify.me FTP! is an efficient and easy to use application whose main purpose is to help you transfer files between your computer and a remote location, namely a FTP server. The program features a simple yet attractive interface, displaying the local folder and the remote server in parallel views, enabling you to quickly find and download or upload the file you need. Additionally, it allows you to connect to several hosts at the same time, using a tabbed style that lets you switch between them with ease. syncplify.me FTP! supports both FTP and SFTP protocols ('Implicit' or 'Explicit'), so regardless of the service you are using, you will be able to work with this utility as your client. The 'Quick Connect' feature helps you input the details of a FTP host and perform the required transfer operation without too much hassle. At the same time, the program enables you to create one or more 'Profiles' which comprise 'Basic Settings', 'Authentication' and 'For Experts' sections, stating the connection details under which you can transfer data. These profiles are then listed in the 'Connect To' menu, allowing you to click on the preferred option and almost instantly have access to your remote data. In order to transfer files, you only have the 'Download' and 'Upload' menus to work with, as well as double-clicking an item to transfer it. Additionally, you can use the context menu options that let you download / upload a selected file. The transfer can be done with or without masks and before proceeding, syncplify.me FTP! will request your confirmation as well as enable you to choose between a series of preferences. Additional functions that this simple FTP client provides you with include the ability to 'Create Directories' in the remote location, 'Rename' or 'Delete' files and folders. It also offers 'Synchro-Browsing', along with the optional creation of any missing items. To summarize, syncplify.me FTP! is an efficient transfer tool that features several useful features and functions that allows you to download and upload data from and to your remote servers, in just moments. Features - Fast and accurate - Quick Connect lets you simply specify a host and connection and start uploading or downloading immediately - Quick Menu for switching between the two folders (local and remote) - Automatically detects SFTP host - Automatic password pop-up when saving/submitted - Connect to multiple hosts at the
