Go to File menu (or click on the file menu at the top of

the screen, or click on the small down-arrow and then select "Open" from the list of options) and select "Import Drawing...". A dialog box will open. Select "Computer File", choose the drawing you want to import. In the dialog box, click "Next" to continue. Click "Browse" to search for a file on the computer, click "Next" to continue. Under "Make sure you select all your drawing's layers," select "Yes" if you want all the layers in the drawing. Click "Open" to select the file. Click "Finish" to complete importing the drawing. The drawing may not be placed correctly, and it may be hard to see. This is because CAD drawings are highly specific to each other and may use undocumented functions or may have parameters which are hard to figure out. The drawing you are importing must be compatible with the version of AutoCAD you are currently running. The import can take several minutes.

To see what AutoCAD is doing as it imports, go to File menu (or click on the file menu at the top of the screen, or click on the small down-arrow and then select "Show Drawing Transcript" from the list of options) and select "Show Drawings Transcript" from the drop-down menu.
