Inverse of the following function I have this function $f(z)=z^n$ with $z\in \mathbb{C}$ and $n\in \mathbb{N}$. I would like to get the inverse of f for some specific values of n and specific z . My attempts: I've tried using the function $f'(z)=nz^{n-1}$, but I'm getting complex numbers that don't seem to be the right

ones. A: Hint: There is no real z such that $\operatorname{Re} z^n = 0$, and $\operatorname{Im} z^n = 0$. And there is no real w such that $z = e^w$. A: The function is not invertible, because you can find z with $z^n = \pm e^{i\theta}$ which are all in the same Riemann surface. For $n=0$ the inverse is: $f(z)=z \iff z=e^{it}, t \in \mathbb{R}$. For $n=1$ the inverse is: $f(z)=z \iff \operatorname{Re} z=0$. As for the inverses when $z=e^{i\theta}$ is a complex root, then there exists $\lambda \in \mathbb{R}$ such that $\lambda + i\theta = \lambda i$. So, $\lambda + i\theta = i \cdot \lambda = \lambda i + i\theta = \lambda^2 + i\theta$ which implies $\lambda = \pm i$ and thus
