Project Decal plug-in, the user can easily add decals to their scenes. We were lucky to receive a copy of Decal Decals Inc's Winanim 3D plugin to test and compare with Project Decal. Winanim is a VFX plug-in based on Alias's Maya. Winanim 3D creates the decals and effects in a separate scene which means that you don't need to be in 3D space to create your effects. You can paint the decals and apply them to any object in the scene, including characters, props and buildings. Here are the highlights of Winanim 3D

- Create Decals - Allow the user to draw, erase, position and rotate individual decals
- The user can even draw the decals on another layer or the background
- Easy to set-up and use
- Effects - Allows users to create and edit vector decals and textures
- Can export your decals to various file formats such as .obj, .stl, .bin
- Keep the decals organized in a single folder, with subfolders for each effect
- Examples - Currently supports twelve decals including sun, clouds, character masks, particle effects and various pattern effects
- Runs in either Maya or Nuke
