The base version of AutoCAD 2016 is priced at \$495.00 and, as of 2018, the software is in its third release. The basic version allows the creation of drawings and models based on the specifications of a drawing that is created and loaded in the software. The maximum number of views for a drawing or model is limited to 3D (with the exception of 2D sheets). Unlike other CAD programs, AutoCAD can not only design products (cars, airplanes, etc.), but also create any kind of objects that consist of lines, such as architectural plans and blueprints, as well as 3D objects, such as chairs, tables, or walls. The software, initially, developed as a CAD program, has been expanded and adapted for many other kinds of tasks, including some not related to CAD, such as mapping, geography, and floor planning, among others. Eligibility for the next AutoCAD release Autodesk, the producer of AutoCAD, has announced the next release of AutoCAD, which is expected to be released in the second half of 2018. The version number is not yet known, but it will probably be 1.7. There is also no release date available. However, we are sure that the next version will introduce some new interesting features. One of them will be undoubtedly associated with the increased complexity of the design environment and the expansion of the functionality of the toolbars. When we examine the features of AutoCAD 2017, one of them stands out, as it was introduced in the new release: the implementation of the interface into a single window with its associated toolbar, which will replace the original toolbars. While this feature does not seem to be very important, it will still have some implications in the operation of the software. As stated in the previous version of the software, after the installation, the user must customize the window size by using one of the five default sizes. The next version will most likely introduce a single window size, instead of five. It is not known if this will be the only change, but we are almost certain that it will be one of the most important ones. Let's see what improvements the next AutoCAD version will bring. A few years ago, the only way to create maps was by using the mobile apps of AutoCAD, which were developed by Autodesk. The company
