Pulmonary granulomatosis in the horse: a critical appraisal of six cases. Six cases of pulmonary granulomatosis in horses are reported. Bronchoalveolar lavage specimens were stained for acid-fast bacilli and stained with Wright's stain for fungal organisms. Histopathologic and cytologic

evaluations were made on the affected lung tissue. The horses ranged in age from 2 to 18 years; four were female and two were male. Three horses had acute conditions at the time of presentation; two had chronic conditions and one had no clinical signs. Three of the horses were draft horses and three were Thoroughbreds. All horses had involvement of several lobes, and all horses had lesions in the distal trachea, bronchi, and bronchioles. Congestion and edema were present in all of the horses. Neutrophilic exudate and lymphoid cell aggregates were observed in the interstitium in all horses. Fungi were present in the affected area of three horses and mycobacteria were found in the affected area of one horse. Histologic findings in the horses varied from mild to severe and included bronchial epithelial changes, necrosis of bronchial and bronchioalveolar epithelium, degeneration and loss of alveolar epithelium, and accumulation of exudate and fibrin between and surrounding alveoli. A benign granulomatous-type lung disease was diagnosed in each case. Pulmonary granulomatosis of horses may

appear as acute (mycobacterial) or chronic (mycobacterial or fungal) conditions. The condition typically affects the bronchi and bronchioles

When I first learned about Bitcoin earlier this year, the earliest version of it that I was familiar with was Bitcoin-Qt. With Bitcoin-Qt, the coin supply was capped at 21 million, and transaction fees weren't required to make a transaction in order to perform the desired action. Nowadays, Bitcoin-Qt is being phased out and replaced with Bitcoin-Core. In the following guide, I'll give you a walkthrough of performing the most common tasks while using Bitcoin-Core, as well as how to submit a transaction using a script. Getting the Source Code Before you can get started, you need to first obtain a Bitcoin-Core copy of the blockchain. To do so, you need to download Bitcoin-Core's source code. I'll cover getting the code in the subsequent section. Bitcoin-Core's source code can be downloaded from its GitHub page. Simply download the source code file for the version of Bitcoin-Core that you want to work with. For example, I'll be working with the Bitcoin-Core source code for version 0.8.4. Getting the Source Code Before downloading the source code, you'll need to get
