You can easily share a link to your Photoshop documents from within Photoshop. This also works in reverse; if you just create a file, you can open it in a browser and download it to your computer. How Photoshop Works The genius of Photoshop lies in the design of the system and the environment that it makes possible. For example, as a basic rule of thumb, the best way to deal with a color image is to start with a grayscale version. This decreases the overall number of colors as well as simplifying the RGB color model into a single grayscale value. Starting a new document in Photoshop is very simple. To create a new document simply press the C key and a blank canvas will appear at the click. You can also choose to use existing files. This can be useful if you're simply looking for an image from your library and don't want to type in the file name. The actions in Photoshop usually provide a shortcut to the most frequently used actions and can be accessed from the Action menu. This menu contains a variety of tools and features for making the best use of Photoshop. While layers are the basic building block of Photoshop, the features of Photoshop provide a complex set of features and tools for editing and manipulating these layers. To give you an example, here is an image that we have placed on one layer: When this layer is placed over other layers, the blending mode will control the color that is displayed. Blend modes are the main feature of Photoshop that enable you to choose how the colors of one layer are blended with the layers below. These blend modes are usually presented in order from most to least blended, and the options are as follows: With Transparency: This option is for the user who doesn't care whether or not some colors are transparent, usually used for special effects. Addition: This option is for adding layers over each other, essentially making multiple layers appear in front of each other. Multiply: This option is used to layer or multiply color and is the most commonly used blending mode. Screen: This option is mostly used in graphic design to screen the colors of the background as well as taking the image color, and using a white background for the finished product. Hard Light: This option is similar to the Screen mode, but the color of the background will be gray instead of white. Soft Light: This option is similar to the Screen option, but it will
