In the following tutorial, we will learn how to increase quality by increasing resolution and resizing images on Adobe Photoshop. Finally, make sure you learn all the techniques discussed below before you start. That way, you will be prepared when the occasions arise.

**Increase Resolution:** Resolution is the number of pixels in an image. Resolution is the size of the pixel that makes up the image. The larger the resolution, the larger the file size, which you will want to avoid. Resolution is measured in dots per inch (dpi). Dpi is a measurement of the density of the dots in the image. Dots per inch is usually measured on the side of the paper on which the image is printed, although in digital format, it is only measured on the pixel itself. The higher the DPI, the higher the resolution.

**Increase Resolutions:** When an image is taken on a camera, it is usually in a dimension that is smaller than the original. As such, you must increase the resolution of the image if you wish to edit it on the computer. Just like increasing resolution, increasing the resolution of an image also increases file size. You should never manipulate your images or images that you are uploading. If you manipulate an image that you are uploading, Photoshop will replace the file.

**How to Increase Resolution in Photoshop:** Start by clicking the image thumbnail you wish to increase. From this point on, we will call the image thumbnail you click on, "Image." To increase the resolution of a single image, Go to Image >> Image Size. If the image is .jpg or .tiff and you wish to increase the resolution of the image, click the arrow next to "Resolution" to move the slider to the right. When the slider is moved to the right, the image will appear in a different sizing on the left-hand side of the screen. A jpeg image is as shown below. A tiff image is as shown below. To increase the resolution of a larger group of images, Right-click on the image area. Select Image Size. A dialog box will pop up. You can change the resolution by clicking and dragging the slider below the name of the resolution. How to Increase Resolutions in Photoshop: Resolutions are measured in dots per inch. By default, your image is

Q: Prove that for all  $a, b \in \mathbb{R}$ ,  $\lfloor a + b \rfloor \leq \lfloor a \rfloor + \lfloor b \rfloor$ . I have to prove the following statement : Prove that for all  $a, b \in \mathbb{R}$ ,  $\lfloor a + b \rfloor \leq \lfloor a \rfloor + \lfloor b \rfloor$ . My solution:  $\lfloor a + b \rfloor \leq \lfloor a \rfloor + \lfloor b \rfloor \iff \exists n \in \mathbb{N}, \text{such that } \lfloor a + b \rfloor = n \leq \lfloor a \rfloor + \lfloor b \rfloor \iff \exists b' \in \mathbb{Z} \text{ and } b' \leq 0 \text{ and } b' \leq \lfloor a \rfloor + \lfloor b \rfloor \iff \exists k, j \in \mathbb{Z}, \text{such that } b = k + j \text{ and } 0 \leq k \text{ and } j \leq \lfloor a \rfloor$ . Then  $a + b = k + (k+j) \iff a + b = k + j + (k+j) \iff a + b = (k+j) + 2k + j \iff a + b = (k+j) + 2k$ . And so  $\lfloor a + b \rfloor = \lfloor (k+j) + 2k \rfloor = \lfloor (k+j) \rfloor + \lfloor 2k \rfloor = \lfloor (k+j) \rfloor +$
