Photoshop Express is a free online service that allows you to edit photos using Adobe Photoshop. For more information on Photoshop Express, check out www.adobe.com/products/photoshop_express/index.html. Getting started with Photoshop The Photoshop Basic workspace is a single window with the tools you need to do most of your editing work. Here's a rundown of the tools and each function: Layer. Layers are the basic building blocks of images. They are represented on your screen as small squares. You may already be familiar with layers if you have done any work with raster images. You may have created images by overlaying each layer over another, like a stack of photo prints. Brush. This tool is similar to a pencil and eraser; it can be used to draw or paint over the image or its layers. When you activate the brush, you have options for size, shape, opacity, and flow (the style of the lines). You have many other brush options for drawing, creating special effects, and so on. Eraser. This tool can be used to clean up a painting by erasing unwanted portions of the image. Rectangle selection. The Rectangle tool enables you to select any area of an image and move it around. It offers many options for moving it in a variety of ways — even moving it around the work area. Transform. The Transform option enables you to distort an image — for example, stretch or shrink it. You can also rotate an object, flip it horizontally or vertically, and change the size of the image. Text. The text tools enable you to add text to an image. Free Transform. The Free Transform tool enables you to stretch or squish an object on your work area. You can also rotate, flip, and distort it as you wish. Fly. You can drag around the image, opening or closing windows that you can use to edit the image. Undo. The Undo feature enables you to reverse previous actions. You can go back to a previous state of an image and modify it to any extent. Redo. The Redo feature enables you to restart the last action you performed and add more editing to it. Crop. This tool enables you to crop out unwanted parts of an image before it's placed on your computer. Pixelate. This tool blurs edges in an image to create a different look.

LONDON — An Ebola outbreak in Congo's North Kivu province has affected a number of villages, according to a report published Friday by local NGOs and three media companies. The World Health Organization said Thursday that the number of suspected cases had risen to 51. Villages in the Manganga and Katana-Bwera districts have been hit hard by the disease that causes a hemorrhagic fever. Some 132 people have been sickened in the outbreak, mostly villagers in their homes. Let our news meet your inbox. The news and stories that matters, delivered weekday mornings. Ministry of Health officials say they have begun investigations into 15 deaths. So far, local officials say no health workers have been infected. A Christian missionary nurse, Marcel Gecaga, and his wife, his sister and several local supporters have been working to contain the outbreak. On Friday, they launched a vaccination drive in the affected villages. The effort was supported by Rwanda and Uganda, WHO officials said. In December, the European Union provided smallpox vaccine for the crisis, which ended two months ago, as well as working with local

"Although we believe it's been contained, we've seen hundreds of villagers who came into contact with victims develop symptoms." But the chances that Ebola will spread widely from Congo's North Kivu province to other African countries is low, officials say. Much of the Congo is remote, and health workers have been able to reach the affected villages. More than 800 health workers — including first-responders — have been moved into the outbreak area. It was unclear when the outbreak began, but the time of year — August is generally a hot month — and the circumstances of the first cases suggest it could be connected to a recent spate of sightings of Forest Giant Haematopota pallipes, a large forest antelope, which scientists believe
