The present article reviews historical developments and the current state of the US healthcare system with respect to the diagnosis and treatment of cervical cancer (CC). The article also discusses the major controversies surrounding US cervical cancer screening guidelines, including HPV testing, and reviews the current evidence-based treatment regimens. Cervical cancer prevention has been successful in reducing the annual CC incidence by approximately 78%, while receiving little attention in recent times. However, CC mortality declined only marginally, possibly due to the development of cervical cancer treatment regimens that

are both effective and efficient. Although HPV test guidelines have been revised by the US Preventive Services Task Force (USPSTF), these documents have been challenged, resulting in controversy and confusion among healthcare providers, patients, and their families. The USPSTF recommendations are based on the findings of relatively few studies and have not provided definitive information on the effectiveness of CC screening. A review of the literature identified limited clinical evidence related to cervical cancer treatment. Following are examples of clinical trials and systematic reviews that have investigated CC treatments. Although there is no consensus regarding CC treatment, there are several options available to patients. An international consensus is needed to provide a uniform approach to CC care.Q: Как выполнить запрос в postgresql при помощи JDBC? Подскажите пожалуйста ка
