Ukino DreamNote is an intuitive and handy application designed for professional and novice writers to create romance, action or thriller novels and stories, with complex characters and plot lines. It can also be used as daily life planner, as you are able to store notes, memos and images. Write novels or short stories and draft your ideas. Despite the outdated and confusing interface, the app's multitude features and practicability can make some users overlook this minor issue. A small menu control panel is displayed, where you can add new folders, memos, maps and characters. Structure your directories and files with ease! Start with creating your new project and saving it to a safe location on the drive. As shown, the menu pane has several quick buttons, which help make your first directory. Once it's set, you can create the tree structure you need by adding main folders and sub-notes. Can be used as a daily journal as well! Each item has to have a name, so choose a title that represents the content best. From the panel's toolbar, you can draft your thoughts and ideas, as well as make dotted maps using the brush. The document feature lets you store the main content or chapters of the novel, list all the plot lines and additional memos. All the text can be customized with font types, sizes and styles. Develop your characters personality and arrange the tree items. You can also outline the groups the character is part of. Plus, you have the choice to make picture folders by selecting the photos you want from the computer or Internet. All the tree notes can be moved up and down in the list based on their importance.
