Initial Release and Limited Use The AutoCAD history begins in 1982 with the release of AutoCAD, which brought CAD to the desktop. Developed by Autodesk, AutoCAD, was the first CAD program designed for the personal computer. During the early 1980s, only large companies had access to CAD software. Today, AutoCAD is the most widely used desktop CAD program. In 1982, AutoCAD was introduced as a stand-alone desktop app for personal computers running the Microsoft Windows operating system. AutoCAD's capabilities were limited, as it lacked many features found in earlier CAD programs. AutoCAD was first sold at $7,995 (U.S. dollars, 1982). AutoCAD In the Beginning The AutoCAD development team realized that they needed to create a CAD product that anyone could use on their desktops. Thus, they developed the concept of CAD as a desktop app. To create a successful CAD app, the team first had to create a CAD product that was compatible with the entire market of desktop users. The AutoCAD team realized that many end-users were not ready to purchase a computer with a dedicated graphics terminal. Thus, they created a CAD program that could be installed and run on most personal computers, regardless of whether the computer contained a dedicated graphics terminal. The first AutoCAD had no numerical tools, no CAD-specific drawing commands, and limited modeling and editing tools. At its early release, AutoCAD had few modeling and editing tools. At its release in 1982, the first AutoCAD could import and export graphics to and from files created on disk drives, making AutoCAD compatible with computers that did not have dedicated graphics terminals. AutoCAD could also import and export graphics to and from a wide variety of graphics formats. The first AutoCAD, or AutoCAD Release 1.0, was launched in November 1982, making it the first desktop CAD program compatible with the personal computer. In the beginning, the AutoCAD software was used primarily by engineers and architects. AutoCAD is now a solid, reliable, and capable product. In 1982, the AutoCAD development team was limited in the software it could create, as there were many features and functions not yet developed. Today, AutoCAD is the world's leading CAD program. Creating a CAD App AutoCAD is a
