# 648931e174

Seems to be different usage of "LNK file created". For this case am able to get it as a string also. Also got it as object now: MondoGamer TV (PRIMARY ENGLISH SUBTITLES; ACE HITTEST; ACCURATE SUBTITLES) (2005) (C) DVDrip (TM) Producer: (8) Unfortunately i tried to use only readtextfile but with no success yet. I tried class and possible with substring but don't know how to properly parse it. Any ideas? A: Try to use this: Funcions(ByVal filePath As String, ByVal FileNum As Integer) As String Dim sw As New StreamWriter(filePath) Dim fs As StreamReader = New StreamReader(filePath) If FileNum >= 1 Then sw.WriteLine(fs.ReadLine()) End If End Function Private Sub Form1\_Load(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles MyBase.Load txtTest.Text = GetFileContent(String.Format("{0}\Out.lnk", Application.StartupPath + "\out.lnk")) txtTest.Text += "|" Dim q As String = GetFileContent(String.Format("{0}\error.txt", Application.StartupPath + "\error.txt")) txtTest.Text += String.Format("|{0}", q) q = GetFileContent(String.Format("{0}\My Documents\test.txt", Application.StartupPath)) txtTest.Text += "|" + String.Format("|{0}", q) End Sub Private Function GetFileContent(ByVal strPath As String) As String 'Return strPath 'Dim sw As New StreamWriter(strPath) 'Dim fs As StreamReader = New StreamReader(strPath) 'Return fs.ReadToEnd() 'sw.WriteLine(fs.ReadLine()) Return System.IO.File.ReadAllText(strPath) End Function For more info
