****Setting Up an Image**** After opening an image in the Adobe Photoshop interface, you have to set up your workspace. As shown in Figure 1.19, the workspace is the place where you will place your image files, tools, and all other items and items you create for your work. It can be one large window or you can create smaller windows. Choose a large workspace if you will be working with large images, as you will have more room to see the whole image and things that you create. **Figure 1.19****Setting up your workspace. ****TIP**** The tools in Photoshop work better when you position them into a workspace that has tools that work well with the tool. The workspace is another tool in Photoshop and is shown in Figure 1.20. As you can see, the main workspace is a rectangular window, and there are two others below it. Some of the tools you use will be in the Tools panel on the right side. Also, some of the tools are available in the Tool Options bar (located at the bottom of the screen). **Figure 1.20****The main workspace. ******

[Effect of Iron on the Prey-Predator System of *Rhinolophus rouzeti* (HÜBNER, 1823). A Field Study]. In the context of the Chernobyl accident, Belarus has been subject to a continuous increase in anthropogenic radionuclides. These anthropogenic radionuclides affect living organisms: especially aquatic organisms living in the Chernobyl area. The large-sized bat *Rhinolophus rouzeti* is of great importance for the conservation of biodiversity in Europe. It is found in similar-sized, highly radioactive areas, such as near the Chernobyl disaster zone, in Belarus. To assess the impact of the ChNPP on the population dynamics of the bat *Rhinolophus rouzeti*, 40 individuals were sampled in the Prypiat area (a forest surrounded by a field) in the summer of 2008. By means of a partially artificial feeding method, it was possible to precisely control the amount of food and to determine the feeding regime. In the study area, the time to the first reproduction of individual bats was positively correlated with the amount of iron. An increase in the amount of iron delayed the first reproductive event of the bats by 23 days. However, the first reproductive event occurred earlier after another increase of iron-in comparison to the first event. These findings cannot be explained by an artefact, but were supported by sex-biased analysis. Bat individuals with a lower amount of iron showed more offspring than those with a higher amount of iron. Our results show that radionuclides can influence the population dynamics of insectivorous bats. © 2019 Inhabitat. New General Assembly could hasten middle school reform VICTORVILLE >> County San Bernardino Unified School District officials say giving the district the ability to alter what students are required to learn in a quarter-system will be a key part of the new General Assembly's efforts to reform the middle grades. "Today it's not possible to allow students to experience life or the world by the time they enter middle school," said District Superintendent Tom Adams. The General Assembly will hold hearings on legislation to allow flexibility for districts to tailor classes based on individual needs and abilities. Districts could establish grades for classes from which students could be dropped and phased out or returned to a later grade based on schoolwide averages. Districts could change how they grade class participation, with students earning full credit on a specific number of

Empowering a Disabled Man to Reclaim a Lost Love "I'm not normally a massage person," said Aaron, when he first came in to see me. "But I'm having a really hard time with my relationship with my girlfriend." The man in front of me had a kind face and short, curly brown hair. He was dressed in sneakers and khaki pants. "It's been very hard to get in touch with her for the past several months." Aaron said that his girlfriend was a massage therapist who taught yoga classes. He broke things off after the two of them ended up at a party together and she started talking about her ex-boyfriend. "My ex was like, 'I don't ever want to talk to her again,'" he told me, "and I just felt a lot of anger." I asked Aaron if he could take off his sweatshirt. When he did, I saw that he was wearing a tattoo of two hearts on his chest. In one heart I saw his girlfriend's name engraved. And in the other I saw the name of the man he was in love with. Before Aaron began, I told him that I wanted to figure out why he had painful thoughts about his girlfriend and the relationship he was left with. "So you think if I don't get to that it's going to last forever?" Aaron asked. "Maybe so," I said, and I explained that I often hear people say that the pain of a relationship that has a bad ending can last a lifetime. "I'm hearing that a lot in my practice," I told Aaron. "So you think that's what's going to happen to me?" "I don't know for sure," I said. "But there's a chance that you can have a really strong, healthy relationship that brings about a lot of happiness, a lot of joy, a lot of love." "Yeah, I know," Aaron said. "But my ex-girlfriend is out of my life now." "That's okay," I said. "That can still happen. ♦"
