American Heart
Association's Get
Your Grip on Your BP

In this day and age, cardiovascular disease is the leading cause of death in the United States. In fact, the American Heart Association recommends that every adult should see a doctor at least once a year for blood pressure and cholesterol screening.

Good cholesterol, bad cholesterol...what does all this mean? In a nutshell, HDL is good and LDL is bad. The higher the good cholesterol, the lower the risk of heart disease. The lower the bad cholesterol, the lower the risk of heart disease. HDL is often called the

“good” cholesterol because the best treatment for coronary heart disease is to elevate it to the point where it is significantly higher than the number of bad cholesterol. This is an ongoing process. The patient will have a repeat cholesterol

test every two years for life as long as their lifestyle does not change. But, if the patient's lifestyle does not change, how can the doctor tell how high that good cholesterol number should be? The doctor uses a calculator based on the patient's

searching a lot. So, please forgive me for this, I am new to R. I have a dataset containing 3 columns. Column 1 contains the positions in the matrix (row, column) for each building. >

```
dat1 [,1] [,2] [,3] A 3
3 3 B 4 1 1 C 3 1 2 D
3 1 2 E 3 1 2 F 3 1 2 I
```

also have an ID field

(1-5) in column 4,
and another ID field
(1-3) in column 2. I
am interested in
finding the ID values
which occur more
than once in column
1 and column 2. My
initial thought was to
use the following line
of code: > mat1
mat1[,2] dat2
duplicated(dat2) X1

X2 A 1 2 C 1 2 D 2 1
E 2 1

Now, the numbers in the above matrix `dat2` seem right to me, except that it also shows that B has 2 times, when it should only have 1. Similarly, E has 2 times when it should only have 1. This question is very basic, but after hours

of searching, I just couldn't find an answer. So, please let me know if this is a silly question and I

Walkthrough, Guided Tour: Explore the new features of AutoCAD and see what makes it easy to work with drawings, maps and 3D models. Key

features A few AutoCAD 2020 updates are also included in the AutoCAD 2023 update:
DrawingGuides:
“DrawingGuides” have been renamed to “Drawing Gridlines” to better reflect how they work. For example,

when you draw a rectangle, gridlines appear automatically, and the new “DrawingGridlines” option lets you decide how many gridlines to display. To customize, simply click “Customize Guide Settings,” and you can easily choose different settings and

appearances. (video: 2:16 min.) View Fit and Extents of Drawing: When you're in the "View" menu, the new "Extents" and "Fit" options display information about a drawing's sizes and margins. Extents display the size of a drawing in pixels,

centimeters,
millimeters or inches
(Video: 3:08 min.)

Rapid Prototyping:

This new feature lets
you send a CAD
drawing to a 3D
printer, allowing you
to create your own
rapid prototypes of
designs. (video: 1:18
