Q: Where does the CMS call block\_content's layout form? What action does the block\_content module call when building the form, for example for the title of the page? I want to put in a piece of text as a replacement for the form, but I need to know where to put it. If the form is being called by the page controller would the location be `/* * Display a form to update the body content. */ function body_content_form($form, &$form_state) { $form['#markup'] = t('Hello World'); return $form; }` The same for the default, for example the default block content. If I want to call a form to update something specific, do I have to create my own module? A: If you mean the \_content module, then this is called in drupal\_build\_form. A: You can create your own module to override specific block or any other, or you can use hook\_entity\_type\_builder(). `$entity_type_builder = entity_builder_cache_clear('node');` `$entity_type_builder->setComponent($entity_type_name,'my_module');` `$entity_type_builder->save();` where \$entity\_type\_name is your module name.

could divide the strips of light patterned on the LCD into fine strips of line shapes. The distance between the CCD was set to 5 cm, and the position of the CCD was fixed. When the laser-stripe patterns were irradiated, fluorescent light emitted by the pattern was imaged with the CCD. All of the data were processed using the GENECA toolkit<sup>^</sup>[<sup>@CR36</sup>]<sup>^</sup>. Analysis of kinesin-14 and kinesin-5 binding {#Sec17} ----- In the initial binding analysis with an ELISA assay, we used anti-His tag monoclonal antibody-conjugated
