AutoCAD

ObjectARX ObjectARX, formerly known as the AutoCAD Software Development Kit (SDK), is a cross-platform library of classes and functions to handle functions and properties of AutoCAD R13 or newer that is similar to VB.NET. Its name is a combination of "object-oriented ARX" and the first part of the development company's name. ObjectARX runs on Windows, Macintosh and Unix (including Linux) platforms. ObjectARX was originally based on Microsoft Visual C++, but now uses a cross-platform C++ standard library called C++14. The software uses a graph-based object-oriented approach similar to Java. It provides common objects used for creating AutoCAD drawing applications, like the IObject classes, and the use of objects to represent objects in the drawing, like objects representing lines, surfaces and curves. Objects are grouped into graphs called entities. Markup Import can be configured to: Import annotations from PDFs as text. Import annotations from
PowerPoint files as text. Import annotations from AutoCAD files as text. Import annotations from
Excel files as text. Import annotations from PDF files as layers. Create 2D layer from annotations
imported from text or spreadsheet files. Notepad and Notepad++ support: Notepad and Notepad++
are fully supported. IntelliType support for modern languages. You can assign a comma, semicolon,
dash, backslash, and so on to a key combination for specific results, even when you type a Unicode
character. For example, you can assign a semicolon and a semicolon to ";," and ";" to be typed as a
single character. With "Edit commands to execute" you can edit the function of the shortcut keys
you assign to your own commands. You can now assign the backslash to key combinations for key
sequence assistance, which runs the last command or command pair the user has typed. A new and
intuitive inline help tool is available in the help engine. With the help engine, you can access the
commands that you are familiar with, and the command parameters that you have used in your own
drawings. You can now use the coordinates in a command to support the Range command, a DDS,
and other commands that reference coordinates. Direct Access keystrokes for free-floating toolbars:
Keyboard navigation to navigate between "toolbars" (free-floating toolbars), just as you can in
Inventor. All-keyboard navigation between workspaces and toolbars. Drag and Drop support: Drag
