The code works but it is very long and over kills all the compilation time and increases the memory usage, I'm looking for ideas to improve it in a generic way that I can use it in all the classes that need a similar behavior. public class MyOrderByInterface implements OrderBy{ @Override public E getElement() { if (head==null) return null; return head.element; } @Override public int getCost() { return 0; } @Override public int compare(T o1, E o2) { if (o1 == null && o

Dziadkowo Dziadkowo is a village in the administrative district

of Gmina Postomino, within Sławno County, West Pomeranian Voivodeship, in north-western Poland. It lies approximately south-east of Postomino, north of Sławno, and north-east of the regional capital Szczecin. Before 1945 the area was part of Germany. Following World War II the native German populace was expelled and replaced by Poles. For the history of the region, see History of Pomerania. References Dziadkowo

1. Field of the Invention The present invention relates generally to an information processing apparatus, a recording medium and an information recording/reproducing method, and more particularly to an information processing apparatus and an information recording/reproducing method capable of reliably performing searching, and a recording medium storing a program for the information processing apparatus.

2. Description of the Related Art In recent years, along with increasing amounts of data information to be processed, a mass storage device such as a hard disk drive or a magnetic disk drive has come to be mounted in an apparatus main body such as a personal computer. The mounting of the mass storage device, which is one of electronic devices, is often accompanied by carrying out a data backup with respect to the data information stored in the mass storage device in an automatic manner. However, if the data information managed by the apparatus main body is restored to the mass storage device, the data information backup cannot be carried out if the mass storage device is full of data information. In order to prevent such a problem, the data information needs to be managed and backed up separately on the mass storage device in accordance with a logical address information. A technique for this purpose is known from Japanese Patent Laid-Open Publication No. 2004-356319, for example. The logical address information manages the data information stored on the mass storage device and is obtained from the apparatus main body. Further, another technique is known from Japanese Patent Laid-Open Publication No. 6d1f23a050
