You also get a frontend for C, C++ and Java. One feature it has over most other programming editors is that it can automatically resolve functions, variables, types and so on. Unlike the "advanced" C support in Eclipse, OmniCC has the information gathered and compiled statically into the.exe, so there is no need to "import files". This means it can be (much) faster to write code, as parsing and compiling is done by the.exe itself. EasyCC is an educational, free compiler for the Win32 platform that can be used with the following languages: C/C++, C#, Visual Basic and Java. EasyCC supports Intel and AMD x86 and x86-64 instruction set architectures and includes a user-friendly, graphical user interface. A command-line interface can also be used to compile and debug. EasyCC is free and

In the following section, we examine the various aspects of the needs for science and technology in India, outline a historical perspective, discuss important issues and problems, and look at some of the potential directions for the future. More than most other countries, India needs to build much of its infrastructure. Almost all of its citizens and about half of its citizens now live in towns and cities, and of course these places need public and private transport, roads, bridges, infrastructure, buildings, water supply, sewage disposal, solid waste disposal, and many other services. The Indian economy is still largely agricultural and most people still live in rural areas, but as India becomes more urbanized, many people will move to urban areas. Although the density of the population is low in rural areas, it is high in urban areas; in India and in many other developing countries, the public utility systems most people rely on, such as drinking water, sewage disposal, electricity, and roads and bridges, are not very good in rural areas. Cities do not rely on their own small town infrastructure, such as bus services, fire engines, and medical services, to support the public utility systems, because they have enough traffic to serve as a buffer to protect those systems.
