The Official Microsoft Toolkit activator for free with all versions Download Links.Q: Show that $F : L^2 \to L^2$ is continuous Let $F : L^2 \to L^2$ be the linear map $F(g) = P_0(g) - P_1(g)$ where $P_0(g)$ and $P_1(g)$ are the constant-coefficient and variable-coefficient Poisson kernels, respectively. I need to show that F is continuous, but I have no idea how to show this. I have tried to use the following equality: $P_0(g) - P_1(g) = \frac{1}{2} \sum_n \int_{\mathbb{Z}} \int_0^\infty e^{-2|n|^2 r^2} P_0(g)(x,r) - P_1(g)(x,r) dr$ but that doesn't seem to be helpful at all. Another idea would be showing that F is uniformly continuous, but I haven't been able to get a clue as to how to do that. Any help will be greatly appreciated. A: If the space X is a Hilbert space, and $T : X \to X$ is a linear operator, then $\|T\| = \sup_{\|x\|=1} \|Tx\|$ is a norm. It is easy to check that this quantity is finite iff T is bounded. Another idea for a uniform continuity is to start with the following estimate for the Poisson Kernel: $\|P_{c6a93da74d}$
